Inside the New China

Seasoned CBS reporter Sharyl Attkisson reveals how she has been electronically surveilled while digging deep into the Obama Administration and its scandals, and offers an incisive critique of her industry and the shrinking role of investigative journalism in today's media. Americans are at the mercy of powerful figures in business and government who are virtually unaccountable. The Obama Administration in particular has broken new ground in its monitoring of journalists, intimidation and harassment of opposition groups, and surveillance of private citizens. Sharyl Attkisson has been a journalist for more than thirty years. During that time she has exposed scandals and covered controversies under both Republican and Democratic administrations. She has also seen the opponents of transparency go to ever greater lengths to discourage and obstruct legitimate reporting. Attkisson herself has been subjected to "opposition research" efforts and spin campaigns. These tactics increased their intensity as she relentlessly pursued stories that the Obama Administration dismissed. Stonewalled is the story of how her news reports were met with a barrage of PR warfare tactics, including online criticism, as well as emails and phone calls up the network chain of command in an effort to intimidate and discourage the next story. In Stonewalled, Attkisson recounts her personal tale, setting it against the larger story of the decline of investigative journalism and unbiased truth telling in America today.

Newcomer's Handbook For Moving To And Living In New York City

Broken Promises is the third book in a trilogy spanning 18 years. Bruce Kushnick, author, senior telecom analyst and industry insider, lays out, in all of the gory details, how America paid over \$400 billion to be the first fully fiber optic-based nation yet ended up 27th in the world for high-speed Internet (40th in upload speeds). But this is only a part of this story.

With over four million people filing with the FCC to 'Free the Net', one thing is abundantly clear -- customers know something is terribly wrong. Every time you pay your bills you notice that the price of your services keeps going up, you don't have a serious choice for Internet (ISP), broadband or cable service, much less competitors fighting for your business, or maybe you can't even get very fast broadband service. Worse, over the last few years, America's ISPs and cable companies have been rated "the most hated companies in America". While Net Neutrality concerns (detailed in Broken Promises) are important, the actions are only a first step and will most likely be tied up in court for the next few years. More importantly, it does not resolve most of the customer issues and there is nothing else on the horizon that will fix what's broken. Broken Promises documents the massive overcharging and failure to properly upgrade the networks, the deceptive billing practices, the harms caused from a lack of competition, the gaming and manipulating of the regulatory system, from the states to the FCC, and exposes the companies' primary strategy: How much can we get away with? There has been little, if any, regard for the customers they serve.--From <http://newnetworks.com/bookbrokenpromises/> --(viewed on June 12, 2015).

Ten years ago, the United States stood at the forefront of the Internet revolution. With some of the fastest speeds and lowest prices in the world for high-speed Internet access, the nation was poised to be the global leader in the new knowledge-based economy. Today that global competitive advantage has all but vanished because of a series of government decisions and resulting monopolies that have allowed dozens of countries, including Japan and South Korea, to

pass us in both speed and price of broadband. This steady slide backward not only deprives consumers of vital services needed in a competitive employment and business market—it also threatens the economic future of the nation. This important book by leading telecommunications policy expert Susan Crawford explores why Americans are now paying much more but getting much less when it comes to high-speed Internet access. Using the 2011 merger between Comcast and NBC Universal as a lens, Crawford examines how we have created the biggest monopoly since the breakup of Standard Oil a century ago. In the clearest terms, this book explores how telecommunications monopolies have affected the daily lives of consumers and America's global economic standing.

The Verizon leadership team stands apart from most leadership teams today in their willingness repeatedly to put the enterprise before the individual. At first blush, this might look like a hopelessly old-fashioned notion in the age of the selfie. Yet, I would argue this is a trait that future leaders and boards of directors across industries would do well to understand and embrace. Seidenberg not once but twice in the service of company shareholders and employees subordinated himself and put off taking sole leadership of the company to advance the enterprise's odds of success. And many others in this

story exhibited the same trait to help build this industry-leading enterprise. They understood that the risk of not acting and thereby destroying value during a period of accelerating technological change and industry consolidation—a situation faced by leadership teams around the world today—was much greater than the risk of stepping in as No. 2 or co-CEO. In my 50 years of experience, it is a rare leadership team that will subordinate itself for the benefit of the industry, customers and the company. That principle, that the company comes first, the individual second, is what will define successful leadership teams of the future. Multiple leadership principles, some new, some timeless, emerge from this narrative and will be of great use to the next generation of leaders across industries and around the world. By taking a look at a company that successfully executed exponential transformation, we can take the strategies of Verizon leaders and apply them to our own experiences.—Ram Charan

Edison: A Biography

Technology and Household Consumption is a comprehensive text that provides insights into technology's impact on consumer behavior and the household environment. Consumption and consumer behavior has become a very important subject of study that is now covered in many disciplines including family economics, culture studies, and feminist/women studies. In the first section, this book provides a historical perspective on how consumer behaviors have changed because of technology and how technology itself has changed. Data on ownership and expenditures is detailed in describing the penetration of technology in the household and changes over time. In the examination of demographics and social changes, an emphasis is placed on women and children. As it is important to understand the entry paths and factors that influence them, the book also introduces a research framework to understanding the adoption and utilization of household technologies. In the second section, the book examines specific household technologies and consumption experiences including shopping choices and behaviors, entertainment outlets and availability, communications technologies, and working at home. The book concludes with a section on the relationships between marketers and consumers.

iPhone: The Missing Manual

A great folk hero in American history, Edison is viewed by the public as a facile inventor, the electrical wizard and the perfect symbol of the self-made and practical creator. But he was also a paradoxical figure: deaf, impoverished and with no formal education as a youngster, Edison nevertheless became a fertile and versatile inventor, accumulated fortunes for himself and others but remained indifferent to wealth except as a means towards more inventions. Edison's key contributions include the carbon microphone, the electric light bulb, electricity distribution systems, the phonograph and the motion-picture camera. Edison's methods were also remarkable: halfway between the craftsman-tinkerer of the early 19th century and the scientist of today, he established and ran pioneering research laboratories with large staffs, yet lacked training in mathematics or the basic sciences. Matthew Josephson's *Edison: A Biography* won the Society of American Historians' Francis Parkman Prize in 1960. "This is an outstanding biography [Josephson] establishes the developing relationship between finance and invention which constitutes the basis for Edison's success [He] has mastered the substance of Edison's inventive activity and has written of it quite authoritatively and vividly." — Thomas P. Hughes, *Technology and Culture* "It is clear that there is reason to welcome yet another book about a man of whom so much has been written. It must have been precisely because so much in the Edison record is myth, fostered by adulators and by Edison himself that Mr. Josephson turned his skillful, corrective hand to a saga that may have seemed more familiar than it actually is. From his well-presented, well-written findings emerges a giant without whom much of life as we live it would simply not exist. It is a first-rate job that needed doing." — John K. Hutchens, *New York Herald Tribune* "A well-researched account of the life of one of America's authentic folk heroes--Thomas Alva Edison--an original creator with a genius for strategic invention Thoroughly absorbing, this significant volume is a competent contribution to the history of American science, and gives not only a sharply drawn picture of this self-educated giant of invention, but also of the beginnings of the

telegraph, electrical, record, motion picture and automobile industries, as well as the sociological changes that were wrought by Edison's practical discoveries." — Kirkus Review "A biography that is dignified, detailed, and objective, sprinkled with moments of humor, pathos, and drama One of the chief virtues of this book is the care taken by the author to build up a realistic picture of Edison the man." — F. Garvin Davenport, The American Historical Review

China is no longer a Third World country. It is now the world's fastest growing economy. Even after the 2008 Olympics, this fact may come as a shock to many Americans, who continue to think that the Chinese still march around in brown uniforms

with red stars on their caps arresting dissidents for wearing capitalist Levis. China has at last count, more than half a billion cell phone users. Indeed, the Chinese are not only the world's leading users of mobile phones, but also the leading suppliers. No Chinese student goes without one and even a donkey cart driver chatting away on a mobile is not an uncommon sight. China's educated New Generation is possibly the most highly motivated force since the post-World War II generation in America. The young people of China are the next wave of a flourishing Chinese middle class now estimated as 13.5 % of the population, and expected to be 600 million strong by 2015, according to Business Week. These young people want to drive cars like ours, live in houses like ours, own condos near the beach, wear designer clothes, and carry cell phones, iPods, camcorders, digital cameras, and MP3 players, just like Americans. Tens of millions already do. During a thirty-month stay in China around 2008, Ayres was presented to soldiers straight out of boot camp, toasted by military generals and governors, invited to parties with local leaders as a "foreign expert and dignitary," and begged to counsel dissidents and the lovelorn. He rode buses jammed with peasants hoping that they would actually be paid at the end of the month. He dickered with farmers in open markets and street vendors desperate to make ends meet. He dealt with smooth, savvy merchants in upscale department stores; and debated policy with Communist Party bosses. This revised paperback edition of the author's earlier work, *A Billion to One*, is a vivid, intimate account of China as it is today.
