This is a faithful reproduction of the Floyd Clymer publication of the same title originally published in 1959. Written in a style that removes the mystique from performance tuning, much of the technical jargon is replaced with easy to read language and, to the credit of the author, he gets the message across without the need for the reader to possess a degree in mechanical engineering. A straightforward common sense approach to the subject of improving a VWs performance and while many of the manufacturers of the performance items referenced within may no longer be in business and prices have changed considerably since 1959, many new suppliers have come forward with alternate performance products. In addition, many of the vintage parts routinely turn up at swap meets and can also be obtained through a variety of vintage performance parts suppliers. Therefore, while some of resources may have changed since 1959 the information is still applicable and should assist in providing the reader with appropriate data to aid in the selection of the newer performance products currently available. This how-to manual also includes complete technical data, tune-up information, fault finding charts and a detailed list of construction changes that took place between the years 1957 and 1959. Out-of-print and unavailable for

many years, this book is becoming increasingly more difficult to find on the secondary market and we are pleased to be able to offer this reproduction as a service to all VW enthusiasts worldwide.

VW Beetle Restoration Handbook

The VW Beetle is one of the best-loved of all classic cars, with many thousands preserved across the world, many in regular use. Over the years countless changes were introduced, together making a mid sixties Beetle, for instance, very different from one built in the mid-50s, or mid-70s, despite the obvious similarities. With the aid of hundreds of full colour photographs this new edition in paperback documents all the Beetle's specification changes and model differences during the classic period 1949-67, making it possible to determine the original specification and fittings of any Beetle from this period. Uses the same format as for the highly successful VW Transporter spec guides. Aimed at early-Beetle owners and enthusiasts. Superbly illustrated with 300 colour photographs. New edition in paperback for 2018.

A blended learning approach to automotive engineering at levels one to three. Produced alongside the ATT online learning resources, this textbook covers all the theory and technology sections that students need to learn in order to pass levels 1, 2 and 3 automotive courses. It is recommended by the Institute of the Motor Industry and is also ideal for exams run by other awarding bodies. Unlike the current textbooks on the market though, this title takes a blended learning approach, using interactive features that make learning more enjoyable as well as more effective. When linked with the ATT online resources it provides a comprehensive package that includes activities, video footage, assessments and further reading. Information and activities are set out in sequence so as to meet teacher and learner needs as well as qualification

requirements. Tom Denton is the leading UK automotive author with a teaching career spanning lecturer to head of automotive engineering in a large college. His nine automotive textbooks published since 1995 are bestsellers and led to his authoring of the Automotive Technician Training multimedia system that is in common use in the UK, USA and several other countries.

By the late 1960s the Beetle had enjoyed over twenty years of continuous production, dominated its home market and conquered export markets all around the world. Volkswagen's policy of constant improvement and refinement to a single model appeared to be vindicated. However, 1968 saw the death of Heinz Nordoff, who was the driving force behind the Beetle's evolution and continued success. In many ways, this was a watershed year; the 1968 model introduced many significant changes to the car, and it became inevitable that a replacement for the venerable Beetle would have to be developed. This book charts the

closing years of the Beetle's production life in Germany; from the revamped 1968 model to the 1302, 1303, the Cabriolet, and the various Specials produced later. Topics covered include: - Brief history , 1935-1967 - Full history, 1968-1980 - Comprehensive production survey - Specification and detail changes by model year [August 1967 to January 1980] - Engine options - Factory fitted optional equipment - Paint and trim colors - Special and export editions - The Karmann Cabriolet
