Pain Management and the Opioid Epidemic

All countries aim to improve housing conditions for their citizens but many have been forced by the financial crisis to reduce government expenditure. Social housing is at the crux of this tension. Policy-makers, practitioners and academics want to know how other systems work and are looking for something written in clear English, where there is a depth of understanding of the literature in other languages and direct contributions from country experts across the continent. Social Housing in Europe combines a comparative overview of European social housing written by scholars with in-depth chapters written by international housing experts. The countries covered include Austria, Denmark, England, France, Germany, Hungary, Ireland, The Netherlands and Sweden, with a further chapter devoted to CEE countries other than Hungary. The book provides an up-to-date international comparison of social housing policy and practice. It offers an analysis of how the social housing system currently works in each country, supported by

relevant statistics. It identifies European trends in the sector, and opportunities for innovation and improvement. These country-specific chapters are accompanied by topical thematic chapters dealing with subjects such as the role of social housing in urban regeneration, the privatisation of social housing, financing models, and the impact of European Union state aid regulations on the definitions and financing of social housing.

A collection of essays from a “great poet-critic-intellectual” (Daily Beast). Adam Kirsch has been described as “elegant and astute...[a] critic of the very first order” (Michiko Kakutani, New York Times). In these brilliant, wide-ranging essays, published over the last eight years in the New Republic, The New Yorker, and elsewhere, Kirsch shows how literature can illuminate questions of meaning, ethics, and politics, and how those questions shape the way we take pleasure in art. In *Rocket and Lightship* he examines the work and life of writers past and present, from intellectuals Susan Sontag, Hannah Arendt, and Walter Benjamin to novelists including E. M. Forster, David Foster Wallace, and Zadie Smith. Kirsch quotes G. M. Hopkins: “Nor rescue, only rocket and lightship, shone.” So shines literature, in these unflinchingly bold and provocative essays—as an illuminating, regenerative, and immortalizing force.

Drug overdose, driven largely by overdose related to the use of opioids, is now the

leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Poor nutrition, foodborne disease and lack of secure access to good food make an important contribution to the burden of disease and mortality in the WHO European Region. Better diets, food safety and food security will not only reduce or prevent suffering to individuals and societies but also help cut costs to health care systems and bring social and economic benefits to countries. People's chances for a healthy diet depend less on individual choices than on what food is available and whether it is affordable. Policies to benefit health through good food and nutrition must extend beyond the health sector to include sectors ranging from agriculture and food processing, manufacturing and trade to transport, retailing, catering and advertising. Food and nutrition policies should be coordinated so that public health is given due priority in the making of food policies by non-health sectors. This publication discusses in depth the components of food and nutrition policies and the evidence of supporting them. It highlights the urgent need for integrated,

multisectoral food and nutrition policies to encourage the sustainable production of food, its safety and the provision of food of high nutritional quality for all. [Editor]

“An invaluable eye-witness account of life at the lower levels of the German Army during the First World War.”—HistoryOfWar.org At once harrowing and lighthearted, Herbert Sulzbach’s exceptional diary has been highly praised since its original publication in Germany in 1935. With the reprint of this classic account of trench warfare, it records the pride and exhilaration of what to him was the fight for a just cause. It is one of the very few available records of an ordinary German soldier during the First World War. “One of the most notable books on the Great War. It is a book which finely expressed the true soldierly spirit on its highest level; the combination of a high sense of duty, courage, fairness and chivalry.”—Sir Basil Liddell Hart “Herbert Sulzbach’s first person diary focuses on four years of trench warfare and is a valuable contribution to the overall individual story of the First World War, more so than many other such accounts perhaps, as the author was

German.”—OCAD Militaria Collectors Resources “A first-class personal account of Herbert Sulzbach’s war seen through his diaries. There is much insight into both his and the German soldier’s attitude to war and events . . . a very readable narrative and adds to the library of sources that are invaluable to counter the legions of postmodern re-evaluations of the German soldier.”—Battlefield Guide
